Detailed Description

Claims

Fulltext Word Count: 9258

English Abstract

Bindings are used to describe a document (and a different document) by associating content elements with layout elements, the layout elements defining layout features or placement information to be applied to the associated content elements in the document, the bindings being stored separately from both the content and layout elements.

French Abstract

Selon l'invention, les affectations servent à décrire un document (et un document différent) par association d'éléments de contenu et d'éléments de présentation, ces derniers définissant les caractéristiques de présentation ou les informations relatives au placement à appliquer aux éléments de contenu associés dans le document, les affectations étant stockées séparément des éléments de contenu et de présentation.

EP 1066569 A1 E G06F-017/30 Based on patent WO 200045292

Designated States (Regional): AT BE CH CY DE DK ES FI FR GB GR IE IT LI
LU MC NL PT SE

Abstract (Basic): WO 200045292 A1

NOVELTY - User input device generates attribute values associated
with selected feature. Image processor identifies selected feature in
visual animated data file (210) and receives attribute values. A
descriptor data structure (251) is generated by processor based on
received attributed values, by inserting one of attribute values into
corresponding one of preset attribute fields in standard descriptor
template .

DETAILED DESCRIPTION - The image processor associates the
descriptor data structure with visual animated data file to produce
modified visual animated data file. The selected feature is identified
in modified file by examining the descriptor data structure. The
selected feature is an object (220) appearing in visual animated data
file and descriptor data structure contains attribute values
representative of the object. INDEPENDENT CLAIMS are also included for
the following:

(a) descriptor data structure generating method;

(b) visual animated data file

USE - For generating descriptor data structure representative of
selected feature in visual animated data file, for searching frames of
visual animated data to detect, identify and label objects of
particular shape or color, or to detect text in frames, such as
subtitles, advertisement text, or background image text, such as
street sign or hotel sign.

ADVANTAGE - Usage of predefined template or set of templates ,
rather than script-based descriptors makes the descriptors and
description schemes of visual animated data file easily recognizable
and searchable.

DESCRIPTION OF DRAWING(S) - The figure shows exemplary visual
animated data file.

Visual animated data file (210)

Object (220)

Descriptor data structure (251)
